

PLANNING YOUR CAREER IN HEALTH INFORMATION

PLANNING YOUR CAREER IN HEALTH INFORMATION

WHAT IS A CAREER IN HEALTH INFORMATION? People who work in this field manage the flow of data produced in the course of providing health care. They collect it, check it, organize, analyze and present it. They also protect information privacy and security.

There are jobs at all levels:

- **Entry-level administrative jobs in health care** can lead to jobs in health information management. These jobs require a high school diploma or equivalent. People in these jobs must have basic computer skills, know about health insurance and understand medical terminology.
- **Mid-level jobs** require a health information certification such as Certified Coding Associate (CCA), Certified Professional Coder (CPC), or Certified Coding Specialist (CCS). Some require an Associate Degree.
- **Mid-to-high level jobs** require an Associate Degree or a Bachelor's degree and two or more years of related experience. Employers strongly prefer certification such as Registered Health Information Associate (RHIA) or Technician (RHIT).
- **High-level jobs** require a Bachelor's degree or higher, and a number of years of experience in the field. Also, most employers prefer a certification, such as the RHIA or RHIT.

To move up from one level to the next, you need certifications, work experience and more education.

WHO ENJOYS WORKING IN THE HEALTH INFORMATION FIELD?

A career in health information is good for people who:

- Want to work in the growing health care industry, but not hands-on with patients.
- Are organized, very detail-oriented and like data.
- Are good at analyzing information and using logic.
- Like working with other people as part of a team.
- Can communicate with patients, co-workers, doctors, nurses and administrators on the job.
- Enjoy working with computers.

WHERE DO PEOPLE IN HEALTH INFORMATION WORK?

Entry level administrative jobs in health care are in hospitals, clinics, doctors' and dentists' offices, health insurance companies, and government offices.

Most of mid-level and higher jobs are in hospitals. People can get their "foot in the door" in a hospital or large health care organization and then take advantage of opportunities for promotion from within.

HOW DOES THE FUTURE LOOK FOR HEALTH INFORMATION CAREERS?

In New York City, there are about 3,000 people working in entry-level health administrative jobs, with more than 100 openings each year. There are almost 4,000 people working in mid- and mid-to-high level jobs, with 160 openings each year. Every year there are more jobs advertised than in the year before. The field is constantly changing, as technology advances. The health information field is expected to grow in the next several years, as demand for health services increases.

HOW CAN I PREPARE TO WORK IN THE HEALTH INFORMATION FIELD?

If you are interested in this field, you should take classes to learn about it. The grid on the back of this brochure shows where you can find these classes in New York City. It shows CUNY colleges, SUNY colleges and community organizations that offer education and training for people who want to work in the health information field.

JOBS IN HEALTH INFORMATION

ENTRY-LEVEL JOBS

MEDICAL SECRETARY, also called **patient services representative** or **medical administrative assistant**. People in these jobs work directly with patients in a doctor's office or clinic. They gather health information and enter it into an Electronic Health Record (EHR) system.

PATIENT REGISTRAR, also called **unit service associate** or **admitting assistant**. These people work with patients in a hospital or nursing home. They gather health information for admitting patients and also make sure information gets to the Medical Records department when patients are discharged. They also help with other clerical duties.

HEALTH INFORMATION MANAGEMENT (HIM) CLERK, also called **HIM Assistant**, **HIM Specialist** and **HIM Analyst**. These jobs are usually in the HIM department of a hospital. People in these jobs make sure medical records are complete and accurate.

MEDICAL BILLER, also called **Accounts Receivable Clerk**. These jobs could be in any type of health care facility. These people prepare health insurance claims or bills and do simple coding.

MID-LEVEL JOBS

OUTPATIENT CODER. These jobs are in clinics, Emergency Departments or doctors' offices. They usually require the CCA or CPC credential. People in these jobs are usually involved with billing.

HIM DOCUMENTATION TECHNICIAN, also called **Health Records Analyst** or **Medical Records Technician**. These people review patient records in hospitals and make sure they are complete and accurate. Employers prefer the RHIT certification.

CANCER REGISTRAR, also called **Tumor Registrar**. These jobs require the CTR certification, which involves both an Associate degree and experience.

INPATIENT CODER. These jobs are in hospitals. They are the most complicated coding jobs. They require the CCS credential. There are more coding jobs in hospitals than in other types of health care facilities.

MID-TO-HIGH LEVEL JOBS

HIM SUPERVISOR. People in these jobs supervise HIM Clerks. They carry out the operations of the HIM Department in a hospital or large health care facility. They might report to the HIM Manager.

HIM MANAGER in a nursing home or clinic. These people manage the day-to-day operations of the Medical Records department, including supervising the staff. They are responsible for all privacy matters for the organization.

CLINICAL DOCUMENTATION IMPROVEMENT SPECIALIST. These people improve the quality and completeness of health information. They work with doctors, nurses and coders to make sure that the medical record accurately includes information about services provided. These jobs usually require at least 3-5 years of experience in a hospital.

DIAGNOSTIC RELATED GROUP (DRG) COORDINATOR, also called **DRG Reviewer** or **Coding Validator**. People in these jobs review the work of coders. They may be involved in audits. The job requires a CCS credential and at least five years of coding experience in a hospital. This is the most-advertised job in Health Information Management in New York City.

HIGH LEVEL JOBS

EHR IMPLEMENTATION SPECIALIST. People in these jobs make sure staff are trained to use EHR systems. They help to organize the flow of work using an EHR system.

DIRECTOR, HEALTH INFORMATION MANAGEMENT (hospital or large health system). People in these jobs oversee the activities of the HIM department of a hospital. They organize the work and manage the staff. They work with all of the departments in a hospital and make sure government regulations are followed.

HEALTH INFORMATICS ANALYST OR SPECIALIST. People in these jobs analyze EHR data to help improve the quality of patient care.

THE FLOW OF HEALTH INFORMATION

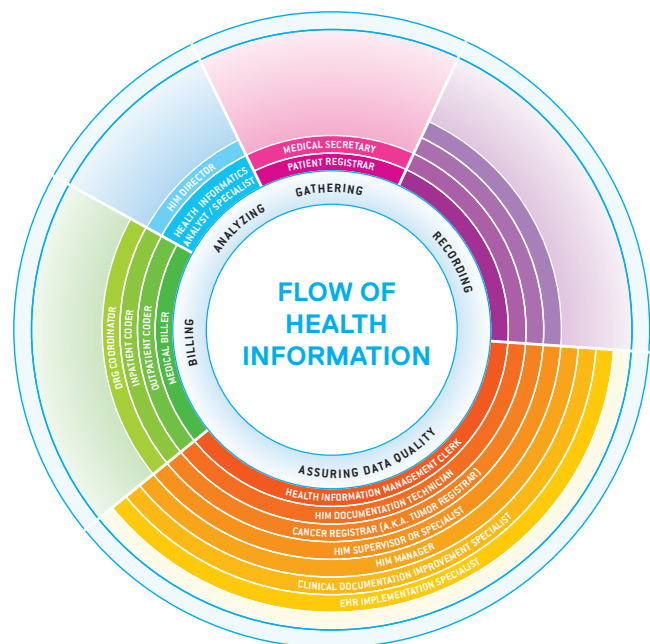

GATHERING: When people visit doctors, clinics or hospitals, they give health information about themselves. This may be on paper forms, verbally or through computer applications. This information is gathered and is usually entered into an Electronic Health Record (EHR) and/or billing system.

RECORDING: When a doctor, nurse, home health aide or other health practitioner provides a service such as a physical exam or an x-ray, he or she records information about that service in the EHR. Information is kept about what services were provided, who provided them and where.

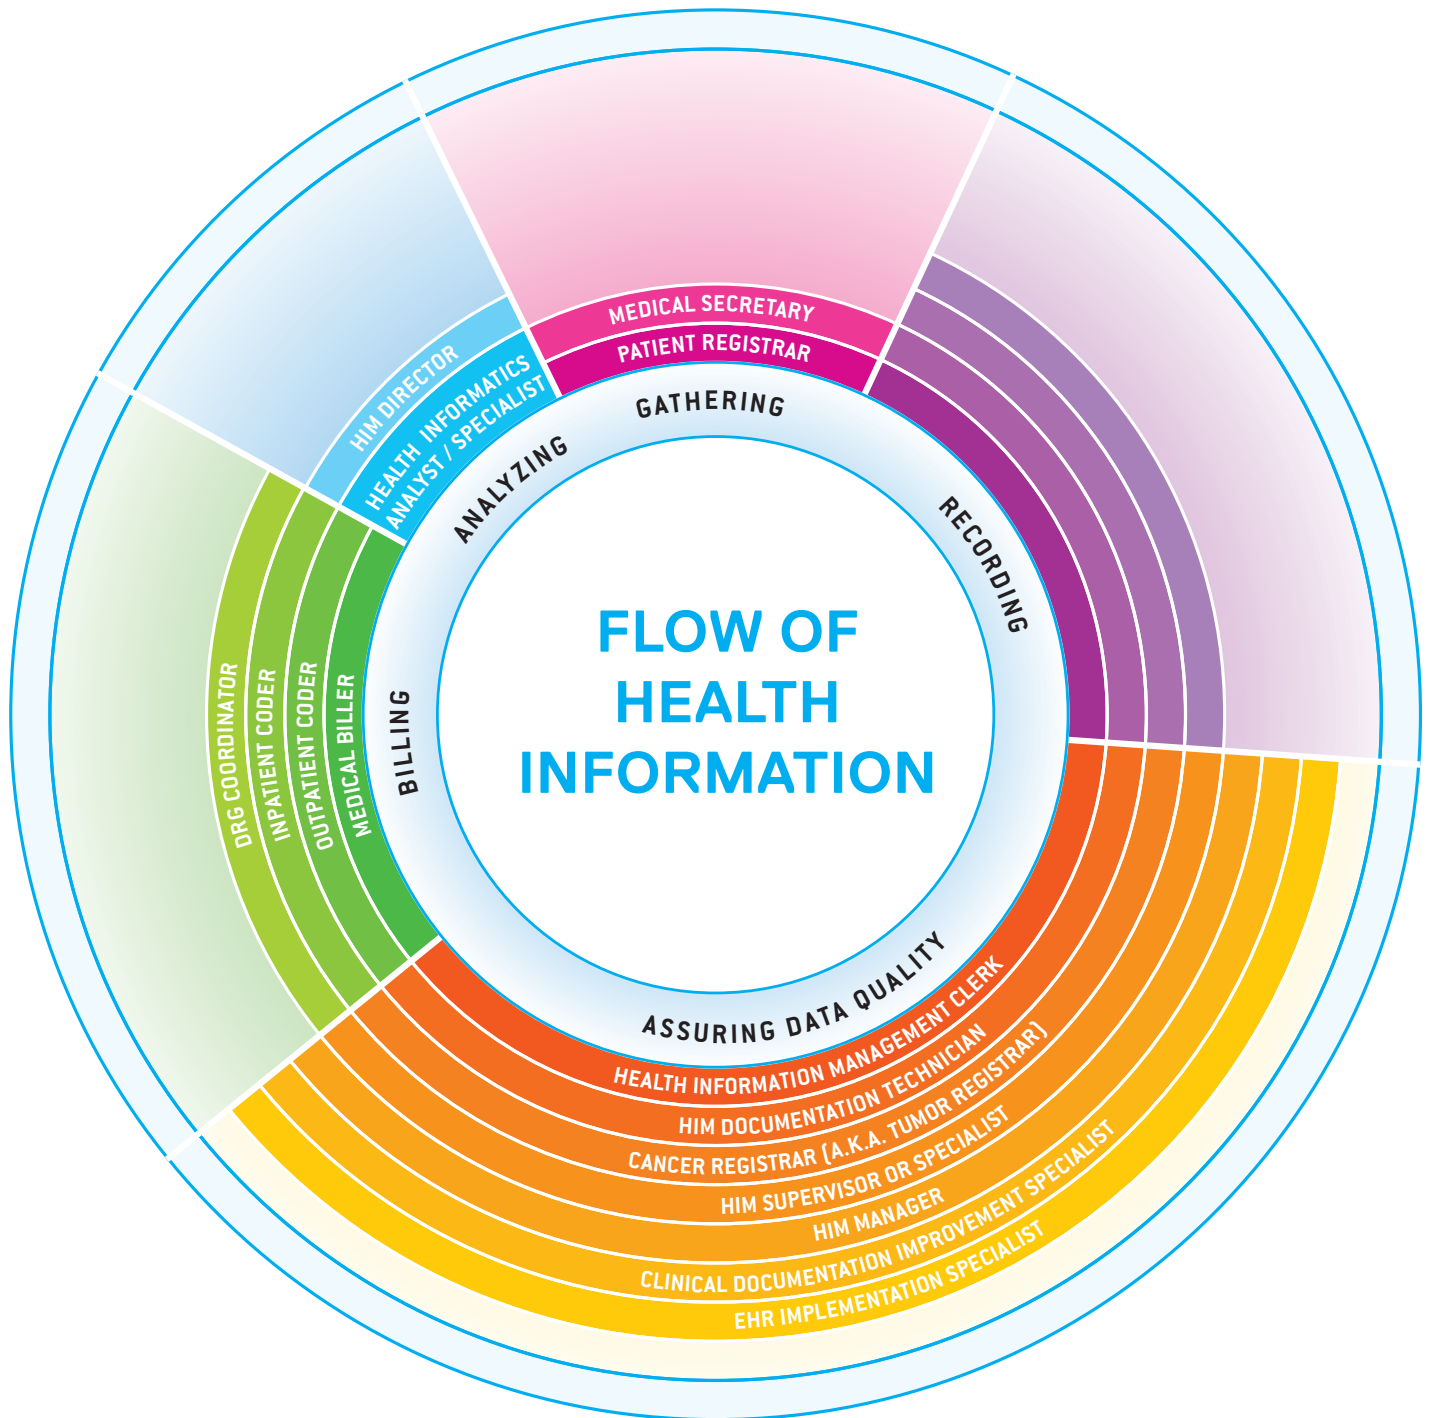

ASSURING DATA QUALITY: This is the heart of the health information management field. After services are provided, health information professionals make sure the information is complete and accurate. It is very important to collect, update and enter information about patients because this is used to track patients over time and link records from different sources.

BILLING (REVENUE MANAGEMENT): After a person has received health care services, a bill is given to whoever is paying for the service – usually a health insurance company, Medicare or Medicaid, but sometimes the patients themselves. This is part of revenue management.

ANALYZING DATA: Health care organizations and public health officials analyze health information. They look at how people use health care services, how effective the care is, and how much it costs, among other things. Analysis is needed to make sure the health care system delivers high quality care.

FLOW OF HEALTH INFORMATION

THIS CHART SHOWS THE COMBINATION OF EDUCATION, CERTIFICATION AND EXPERIENCE TYPICALLY NEEDED TO QUALIFY FOR EACH POSITION.

	JOB TITLE	MINIMUM EDUCATION	CERTIFICATION	YEARS OF EXPERIENCE	ESTIMATED SALARY RANGE*
ENTRY	MEDICAL SECRETARY	HIGH SCHOOL + TRAINING	NONE	0-1	\$25K - \$48K
	PATIENT REGISTRAR	HIGH SCHOOL + TRAINING	NONE	0-1	\$20K - \$40K
	HEALTH INFORMATION MANAGEMENT (HIM) CLERK	HIGH SCHOOL + TRAINING	NONE	0-1	\$25K - \$60K
	MEDICAL BILLER	HIGH SCHOOL + TRAINING	NONE	0-1	\$25K - \$50K
MID	OUTPATIENT CODER	HIGH SCHOOL	CCA OR CPC	1-2	\$25K - \$48K
	HIM DOCUMENTATION TECHNICIAN	HIGH SCHOOL	RHIT PREFERRED	1-2	\$23K - \$58K
	CANCER REGISTRAR	ASSOCIATE	CTR REQUIRED	2-3	\$35K - \$60K
	INPATIENT CODER	HIGH SCHOOL	CCS REQUIRED	2-3	\$31K - \$59K
MID-HIGH	HIM SUPERVISOR	ASSOCIATE	RHIT PREFERRED	2-3	\$31K - \$60K
	HIM MANAGER	ASSOC. IN RELATED FIELD	RHIT PREFERRED	3-5	\$40K - \$79K
	CLINICAL DOCUMENTATION IMPROVEMENT SPECIALIST	BACHELOR'S	CCS, SOMETIMES RN	3-5	\$54K - \$98K
	DRG COORDINATOR	BACHELOR'S	CCS	5-10	\$46K - \$90K
HIGH	EHR IMPLEMENTATION SPECIALIST	BACHELOR'S	RHIA PREFERRED	3-5	\$57K - \$110K
	HEALTH INFORMATICS ANALYST OR SPECIALIST	BACHELOR'S/MASTER'S	RN OR RHIA	5-10	\$66K - \$120K
	HIM DIRECTOR	BACHELOR'S/MASTER'S	RHIA REQUIRED	7-10	\$58K - \$180K

HEALTH INFORMATION CERTIFICATIONS

MEDICAL CODING

- AHIMA's Certified Coding Associate (CCA) and AAPC's Certified Professional Coder (CPC) are entry-level certifications and are helpful in getting a job in a doctor's office, clinic or hospital Emergency Department.
- AHIMA's Certified Coding Specialist (CCS) is a more demanding certification that is needed to be an inpatient coder in a hospital. This is considered the "gold standard" coding credential.

HEALTH INFORMATION MANAGEMENT

- AHIMA's Registered Health Information Technician (RHIT) is required for most mid- to high-level jobs. It requires an Associate degree from a specially accredited program and passing an exam.
- AHIMA's Registered Health Information Administrator (RHIA) is required for most high-level jobs. It requires a Bachelor's degree from a specially accredited program and passing an exam.

The CERTIFIED TUMOR REGISTRAR credential is awarded by the National Cancer Registrars Association. It requires an Associate Degree. The amount of experience needed depends on the Associate Degree major.

* Estimated salary ranges were supplied by Payscale.com and represent the bottom 10% to the top 10% of salaries in NYC for each position.

CAREER PATHS

There are many possible career paths in the health information field. People who start off in entry-level administrative jobs in health care may move into a career in **Health Information Management (HIM)**.

There are three main types of career paths in **HIM**:

- **CAREERS IN CODING**, especially in hospitals. As people gain expertise, they can become very valuable. This is because coding must be correct so that health care providers collect the right amount of money for the services they have provided.

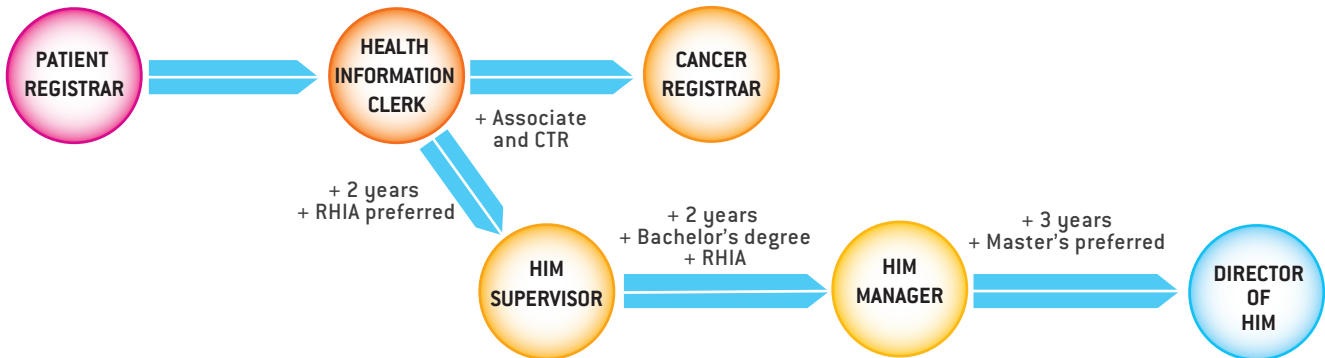

- **CAREERS IN OPERATIONS**, or managing medical records, including EHR systems. These jobs do not involve coding, but require knowledge of how health data is maintained and used.

- **CAREERS OUTSIDE OF THE HIM DEPARTMENT** or outside a health care provider. These may include jobs in an Electronic Health Records (EHR) company, in care management, compliance or data analytics, or in a hospital's IT department.

WHERE THERE ARE COMPUTERS, THERE ARE IT JOBS!

In addition to jobs and careers in health information management, some IT professionals work in health care. There are three broad categories of jobs in **HEALTH IT: hardware, software and cyber-security.**

HARDWARE refers to the physical components of a computer. This includes computer networking. Many people enter this field in Help Desk or Desktop Support jobs. Most employers require a certification in network administration such as CompTIA A+ or Network+. Because people in these jobs help computer users to solve computer-related problems, customer service skills are also important.

SOFTWARE includes operating systems, applications and programs. Jobs in this category include web developers, applications and system software developers, and database developers. This is a large and growing category of jobs. People in this field usually know more than one programming language.

CYBER-SECURITY professionals protect computer networks and the information within them. Because these activities straddle both software and hardware, people in these jobs must know both.

The graphics to the right indicate typical education levels for these jobs, but a lot of Health IT is about showing that you know how to do the job and have experience.

People learn on the job and move to higher positions based on their experience and track record. Industry certifications can be important.

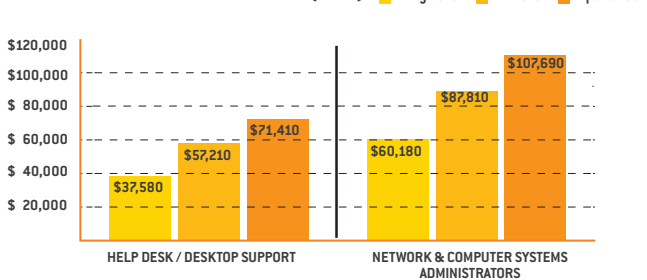

- + Growing faster than average for all jobs
- ++ Growing twice as fast as average
- +++ Growing three times as fast as average
