Key Stats: Fall 2022 Data

OIRE Recent Activities:
- Survey of bench science students on paycheck issues.
- Survey of GC student parents on childcare needs for the Child Development and Learning Center.
- Focus groups with faculty, students, staff, and alumni to support the development of the new strategic plan.
- New updated website with data dashboards and reports.

Key Stats: Admissions
- After an unprecedented year in 2021, doctoral admissions in 2022 are nearly back to pre-pandemic levels.
- In 2021, there was a substantial increase in doctoral applications, aligning with national trends. Despite this growth, the GC decided to reduce the incoming class to offer better financial support for students. Therefore, the number of admitted and enrolled doctoral students in 2021 was lower than in previous years.

Key Stats: Graduates
At the time of graduation, findings from NSF’s Survey of Earned Doctorates reveal:
- Over two-thirds of GC doctoral graduates have a work commitment upon graduation. These rates have consistently exceeded the national benchmark by around 10 percentage points.
- GC Black and Hispanic graduates have significantly outpaced the national benchmarks for those who graduate with a work commitment.
- 60% or more of GC graduates stay in the same region (mid-Atlantic), about 15-20% higher than the national average.
